## EDUCATION

### Master of Information Systems Management - 3.97 GPA

Apr 2022

*Brigham Young University - Marriott School of Business*

*Provo, UT*

- Specialized Courses: Full Stack Dev, Machine Learning with Python, AWS Infrastructure, Information Security
- Capstone Project: 3D augmented-reality world-traveling experience designed for Microsoft HoloLens 2 headset

### Bachelor of Arts in French / Minor in Computer Science

Jun 2021

*Brigham Young University – College of Humanities*

*Provo, UT*

- Awarded first place in French Business Language Case Competition
- Specialized Courses: Python Analytics, Data Structures, Android App Dev, Algorithm Design and Analysis, Web Dev

## SKILLS & TOOLS

- Proficient with Java, Spring / Spring Boot, Git
- Experienced with Golang, Kotlin, SQL, Kafka, Rabbit, K8s, MongoDB, Python, Kibana
- Fluent in French; conversational in Tahitian

## EXPERIENCE

### Senior Software Engineer - Identity and Access Management

Sep 2025 - Present

*Domo*

*American Fork, UT*

- Own and enhance core platform services spanning user management, roles, grants, groups, login flows, session management, and audit logging for 2,600+ enterprise customers
- Enhanced Direct Sign-On (DSO) configuration, allowing enterprise customers to selectively exempt users, such as contractors or temporary employees, from SSO requirements without adding them to their Identity Provider
- Helped lead ownership and design decisions of multiple large-scale Java/Kotlin microservices as well as our Golang-based reverse proxy / API gateway, ensuring high availability and security for the broader platform
- Led the team in the platform-wide deprecation of an insecure session cookie, resolving 431 HTTP errors caused by oversized session cookies across all customers and significantly reducing the attack surface
- Mentor junior engineers on the team through code reviews, technical guidance, and day-to-day collaboration; participated actively in the hiring process including interviews and candidate evaluation
- Presented at internal developer meetups on advanced Spring Boot topics, sharing niche backend expertise with peers
- Leverage Claude Code daily as a collaborative engineering partner, while deliberately taking sole ownership of complex implementations to retain deep knowledge of critical implementations

### Senior Software Engineer

Jan 2024 - Sep 2025

*Goldman Sachs*

*Salt Lake City, UT*

- Helped save the firm ~\$375M by providing financial exposure tracking at the account level via Java/Spring Boot services and IaC-defined data warehouse models I implemented for a firmwide regulatory initiative
- Independently designed and implemented a Spring Boot RESTful microservice to generate daily XML reports for FINRA, enabling the firm to track account-level risk status; handled complex holiday logic, multi-source data aggregation, and strict regulatory formatting while collaborating cross-functionally to clarify evolving requirements
- Accelerated new-joiner onboarding and improved code quality by 15% through mentorship, process documentation, and championing team-wide adoption of Sonar for static analysis and standards enforcement
- Independently developed an interactive graph visualization tool using Python and pyvis/vis.js to map dependencies among 1000+ scheduled Java jobs to reduce recurring production issues and development time; leveraged LLMs to accelerate prototyping and presented to 100+ global engineers, earning strong recognition for improving systems

### Junior Software Engineer

May 2022 - Dec 2023

*Goldman Sachs*

*Salt Lake City, UT*

- Utilized Java, Spring Boot, and Kubernetes to develop and maintain 30+ large-scale microservice and monolithic enterprise applications deployed to Linux hosts through GitLab CI/CD pipelines, on a monthly major release cycle
- Employed Apache Kafka/Java/Terraform to manage event streaming from web applications to 130+ datasets in OLAP warehouse and SQL/Java for 50+ datasets in OLTP relational and non-relational datastores
- Created and managed interactive dashboards utilized by over 150 internal operations employees, enhancing time-sensitive financial and regulatory decision-making processes
